Professional Experience

Backend and Blockchain Developer, BigLadder [🔗](#) 03/2026 – Present

- Architected and deployed EVM-compatible Web3 applications and high-throughput Node.js/Express REST APIs bridging on-chain logic with Web2 databases.
- Utilized PostgreSQL and Drizzle ORM for schema design and scalable data management across backend microservices.
- Developed real-time blockchain event indexers using WebSockets to sync smart contract state changes with PostgreSQL.

Blockchain Developer, Pandora Finance [🔗](#) 02/2022 – 02/2026

- Lead the design, development, and deployment of blockchain-based applications, smart contracts, and decentralized systems, including Backend.
- Architect and maintain secure, scalable blockchain infrastructures using **[mention technologies: Solidity, Ethereum, Hardhat, Foundry, Node.js, Express.js, MongoDB/PostgreSQL, REST APIs, etc.]**.
- Manage and mentor a team of **10** developers, overseeing code reviews.
- Collaborate with cross-functional teams including product managers and business stakeholders to define blockchain solutions aligned with business goals.

Full Stack Developer Intern, Dvertex [🔗](#) 10/2021 – 01/2022
Noida, India

- I designed and implemented the entire backend system for Safai Mitra [🔗](#).

Projects

Order Workwear [🔗](#), B2B commerce platform for printed and embroidered workwear 03/2026 – 09/2026

Designed and built the OrderWorkwear API — a multi-tenant Node.js backend for branded workwear commerce. Owned auth, company onboarding, catalog sync, order pricing/approvals, and Stripe checkout.

Tech stack: Solidity, Ethereum, Node.js, Express, TypeScript, Postgres, Drizzle, Zod, AWS (Cognito, S3, EC2), Stripe.

Velvet Capital [🔗](#), DeFi Yield Aggregation Protocol 06/2025 – 01/2026

Designed and implemented a UUPS-upgradeable vault **smart contract** [🔗](#) (Solidity 0.8.24, OpenZeppelin) with ERC-4626-style share accounting, deposit caps, and pluggable yield strategies.

- Built Aave V3 and Uniswap V3 strategies: mark-to-market lending valuation, single-NFT liquidity positions, and realize-on-harvest fee collection swapped back to the vault asset.
- Implemented a fee module with capped, time-prorated management fees, performance fees on realized profit only, and entry/exit fees.
- Built a Chainlink oracle module that normalizes prices to USD, supports direct and composed feeds, and rejects stale prices.
- Added a whitelisted swap router with slippage checks, plus a cooldown-gated rebalance engine that moves capital between overweight and underweight strategies.
- Wrote keeper bots that harvest yield, charge fees, and build 0x swap calldata for automated strategy operations.

- Implemented off-chain governance verification with EIP-712 signed votes, Merkle proofs of voter weight, and on-chain tallying with quorum and deadline checks.
- Covered deposit, withdraw, harvest, and rebalance flows.
- Tech stack: Solidity 0.8.24, Hardhat, OpenZeppelin (UUPS, EIP-712), ethers.js v6, Chainlink, Aave V3, Uniswap V3, 0x Swap API, Node.js, Merkle trees, Chai.

ACONOMY , *RWA Tokenization P2P Marketplace*

02/2024 – 05/2025

Built the **Smart Contract** , for Aconomy (**Audit Report** ) , a peer-to-peer marketplace where physical assets (watches, art, collectibles, real estate) are tokenized as 1:1 NFTs and used on-chain for trading, escrow, and lending.

- Designed and implemented upgradeable Solidity contracts for NFT minting, collections, a marketplace, and escrow so tokenized real-world assets can be listed, traded, and settled on-chain.
- Built NFT lending and borrowing plus funding-pool contracts so holders can borrow against collateralized assets, with repayment, default, and fee checks that protect lenders.
- Added validator staking and on-chain attestation so physical assets are verified before they enter the marketplace, with provenance recorded on-chain.
- Wrote Hardhat test suites across marketplace, lending, staking, pools, and NFT flows, and deployed upgradeable contracts.
- Built the whole backend using Node.js, Express.js, and MongoDB for Aconomy

PROPTY , *Fractional Tokenized Property and Asset Marketplace*

2023 – 2025

Developed secure **Solidity smart contracts** for asset trading, buy/sell transactions.

Built the **Node.js/Express.js backend** with **REST APIs** for user, asset, transaction, and marketplace management, using **MongoDB** for persistent off-chain data storage and synchronization with on-chain smart-contract events.

Education

Bachelor of Technology in Computer Science and Engineering,

08/2017 – 05/2021

Indian Institute of Information Technology Manipur 

Skills

Blockchain & Smart Contracts: — Expert
Solidity, Ethereum, Web3.js, Ethers.js, Hardhat, Foundry, OpenZeppelin, UUPS Proxy, Stable Coin

Backend: — Expert
REST APIs, MongoDB, Postgres, Express.js, Node.js

Programming Languages: — Expert
JavaScript, Node.js, C/C++

Others: — Expert
Data Structures and Algorithms
